

## PRODUCTS

Central Concrete Supply has a line of new and innovative products readily available for your concrete needs. Below are just a few, please call us if you have any questions.

### SiteSet™

Can be used to reduce setting time in ready-mix concrete while providing the following benefits:

- Accelerated set time in cooler temperatures.
- Minimized set delay in colder temperatures.
- Adherence to ASTM C-494 requirements for accelerating admixtures.
- Reduced setting challenges presented by high fly ash mixes.
- Early stripping and re-use of forms.

### SiteFill™

Central Concrete utilizes the most up-to-date concrete technology to deliver SiteFill™, a product line featuring ready mixed fill materials, the solution to a variety of backfill applications on any jobsite.

- SiteFill™ is designed to meet the contractor's needs for flowable fill, controlled density fill, controlled low strength material, non-shrink backfill, slurry and trench fill.
- SiteFill™ products consist of combinations of cementitious materials, aggregates, water and admixtures.
- SiteFill™ products are the solution to all your placement concerns, as the SiteFill™ line of mixes range from self-leveling to dry pack, non-flowing fill materials.
- SiteFill's™ unique chemistry makes this product line the material of choice for all types of fill applications including products for fast set when paving immediately after consolidation is necessary.
- SiteFill's™ low compressive strength range of 50-300 psi make SiteFill the practical solution when excavatable backfill is necessary.
- SiteFill™ flowable products are ideal for use in congested and restricted-access areas, eliminating the need for compacted soil or conventional backfill while still attaining 100% compaction.

### SiteMesh™ Fiber Reinforcement

Central Concrete's line of steel and synthetic fibers is the efficient and economical solution to out of control increases in steel prices.

- SiteMesh™, can be used in place of steel and wire mesh for all secondary reinforcement applications.
- SiteMesh™, is added directly to your concrete mix and delivered to your jobsite by Central Concrete.
- SiteMesh™, eliminates the need or the time required to purchase, store, handle, cut, or place wire mesh or steel.
- SiteMesh™, creates a uniformly reinforced product in three dimensions.
- SiteMesh™, reinforced concrete is easily pumped, placed, and finished.
- SiteMesh™, can be used in all your concrete to reduce plastic shrinkage cracking.
