

SIERRA PRECAST Inc.

For over twenty years we at Sierra Precast, Incorporated have proudly served all facets of the construction industry (residential, commercial, private sector and public works) as the premier precast concrete wall contractor.

As a bondable State of California licensed contractor we provide our clients with complete scopes of work for their construction projects. Forward planning assistance; aesthetic design; structural engineering; foundation construction; panel casting, transportation and erection; final finishing and painting are all completed by our own skilled and experienced staff.

Our blend of old world craftsmanship and modern technology enables us to economically fulfill any project site requirement and meet any challenge, such as: the retaining of soil (partially or totally); sloping sites; flood containment; rocky, sandy or expansive soils; utility conflicts; small or partially inaccessible sites; etc.

This page features only a sampling of the various styles of walls (sound attenuating, retaining and building), columns and architectural details that we are currently providing. We are always happy to work with our clients in an effort to provide them with unique and individualized projects by either modifying an existing wall style or developing a completely new aesthetic concept.
